

# THE BEST HOUSE FOR YOU

When we are ready to buy a house, we often need to consider a number of factors: price, area, location and some others. It will spend lots of time and we can hardly decide.

To solve this problem, our team developed the Singapore HDB House Selection APP. Through user input some information, it can help you to select houses. According to reliable data sources and detailed scoring mechanism to visualize the data, and according to the user's choice of attribute priorities, use radar maps show users ten recommended housing information, to help users filter the ideal house. At the same time, we also mark all the houses on the map, and users can click on the tags to get specific information about the house. We also provide users with information about housing in the form of forms.
